MD. ASIF IMTIYAJ CHOWDHURY

CLOUD SOLUTION ARCHITECT

+8801748-298776 | Dhaka, Bangladesh

asifimtiyajchowdhury@gmail.com | GitHub | LinkedIn | Portfolio

SUMMARY

Cloud and DevSecOps Solutions Architect specializing in enterprise multi-cloud design, infrastructure security hardening, and automated governance across AWS, GCP, and Huawei Cloud. Proven track record strengthening organizational security posture through container image hardening, Kubernetes RBAC and Network Policy enforcement, CI/CD pipeline security integration, and comprehensive vulnerability management. Adept at driving operational resilience through automated GitOps pipelines, full-stack observability (Grafana, Prometheus, Loki), incident response runbooks, and strategic FinOps practices that reduce infrastructure cost overheads while maximizing system throughput.

EDUCATION

Bachelor of Science, East West University 2023
Computer Science and Engineering

WORK EXPERIENCE

Cloud Solution Architect Dec 2025 – Present
Huawei Technologies *Dhaka, Bangladesh*

- Lead pre-sales technical strategies and multi-cloud architecture design for high-value enterprise tenders, orchestrating end-to-end HLDs, LLDs, Technical Proposals, and Statements of Compliance (SoC).
- Design HLD and LLD architecture for application migration engagements, translating customer business requirements into customer-centric technical solutions that align migration strategy with operational and compliance constraints.
- Evaluate high-scale RFP/RFI/RFQ compliance frameworks to mitigate technical deployment risks, bridge architectural design gaps, and secure corporate technical alignment.
- Design and benchmark enterprise Private Cloud platforms against industry alternatives including VMware, OpenStack, Nutanix, and Oracle, accelerating strategic greenfield and brownfield infrastructure validation.
- Configure highly resilient Public Cloud architectures incorporating TLS/SSL termination, WAF policies, and firewall rule sets against AWS, Azure, and GCP topologies, improving compute resource allocation efficiency for public sector bids.
- Maintain strict Git-based version control over all technical documentation artifacts including security compliance checklists and vulnerability audit reports, ensuring seamless continuity from pre-sales discovery to engineering delivery.
- Share and contribute hands-on DevOps expertise – CI/CD automation, containerization, and observability tooling – across delivery and engineering teams, reinforcing technical alignment between pre-sales architecture and production implementation.

Lead DevOps Engineer Jan 2025 – Dec 2025
Flagship Digital Ltd *Dhaka, Bangladesh*

- Architected and orchestrated production-grade AWS infrastructure using EKS, DocumentDB, and ElastiCache clusters; achieved 99.99% uptime while optimizing resource footprints to slice cloud spend by 30%.
- Engineered declarative Infrastructure as Code (IaC) utilizing Terraform modules and Ansible playbooks, increasing API throughput by 35% via optimized container networking and database pool tuning.
- Developed secure multi-stage BuildKit Docker configurations with integrated image scanning layers, cutting CI/CD pipeline durations by 40% while enforcing vulnerability gates before production promotion.
- Built a unified observability ecosystem using Grafana, Prometheus, Loki, CloudWatch, and Middleware.io, implementing precise Service Level Objectives (SLOs) that reduced incident detection time (MTTD) by 50%.
- Hardened Kubernetes security posture by enforcing RBAC policies, Network Policies, and Secrets Management; integrated automated container scanning (Trivy, Falco) and OWASP dependency checks into CI/CD pipelines alongside strict AWS IAM least-privilege access controls.

- Managed SSL/TLS certificate lifecycle, configured Nginx-based WAF rules, and implemented firewall policies to secure ingress traffic across production microservices endpoints.
- Mentored a cross-functional team of 6 engineers on cloud-native patterns, GitOps workflows, and trunk-based development strategies to improve delivery velocity.

Cloud Service Engineer Mar 2024 – Dec 2024
Huawei Technologies *Dhaka, Bangladesh*

- Designed and deployed large-scale AI-driven intelligent video analytics configurations on Huawei Public Cloud (HCS/HCSO) for major enterprise accounts across Bangladesh and Sri Lanka.
- Partnered directly with core HQ platform engineers to debug and resolve underlying Go-based Terraform provider resource allocation bugs, unblocking critical infrastructure provisioning automations.
- Managed Docker containerization, Kubernetes (including lightweight K3s distributions) worker nodes, and Elastic Volume network storage backends within Banglalink's private cloud environment; enforced container image hardening and network segmentation policies.
- Formulated technical validation documents, architecture runbooks, incident response playbooks, and solution proposals to establish institutional DevOps and security governance.

CONSULTING EXPERIENCE

DevOps & Infrastructure Consultant May 2025 – Nov 2025
SPG Trust *Dhaka, Bangladesh (Remote)*

- Diagnosed and resolved critical Redis cache stampede vulnerabilities and session synchronization failures, dropping production-level backend API failure rates by 45% and eliminating session hijacking attack vectors.
- Constructed declarative multi-environment IaC using Terraform and Ansible; automated delivery workflows via GitHub Actions and ArgoCD to enable zero-downtime Canary deployments on AWS EKS.
- Implemented centralized monitoring and security alerting arrays utilizing Prometheus, Grafana, and Loki log aggregation, accelerating engineering root-cause analysis (MTTR) by 50% through structured tracing metrics and anomaly detection.
- Authored technical disaster recovery runbooks, incident response plans, target state architecture blueprints, and cluster onboarding manuals, accelerating external vendor alignment and onboarding cycles.

SKILLS

Cloud Platforms	AWS, Huawei Cloud (HCS, HCSO), GCP
Infrastructure & DevOps	Linux, Terraform, Ansible, Pulumi, Docker, Kubernetes (EKS, K3s), CI/CD (GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD), GitOps, Cloud Migration
Security & DevSecOps	Trivy, Falco, OWASP, WAF, TLS/SSL Management, RBAC, Network Policies, Secrets Management, Firewall Configuration, Infrastructure Hardening
Monitoring & Observability	Grafana, Prometheus, Loki, CloudWatch, Middleware.io, Sentry, OpenObserve
Programming & Scripting	Python, Bash, JavaScript, Java, TypeScript, C, C++, PHP, Dart
Web Technologies	ReactJS, NextJS, NodeJS, ExpressJS, HTML, CSS
Databases	PostgreSQL, MongoDB, Redis, MySQL, SQLite
Tools	Git, GitHub, GitLab, Nginx, Selenium, Cypress
Project Management	Agile, SDLC, RFP/RFQ Analysis, Stakeholder Communication, Technical Documentation, Incident Response Planning

PROJECTS

3-Tier Microservice Deployment – Docker-based React, Node.js, Golang, and PostgreSQL microservice stack.

Terraform – Huawei Cloud Resource Provisioning – Automated public cloud provisioning with Terraform provider bug fixes.

GitOps CI/CD Pipeline (Jenkins + ArgoCD) – End-to-end GitOps deployment automation.
